The Mobile Resource Suite (MRS) is a mobile forest inventory and GIS update application. The MRS seamlessly integrates with other Silvics products including Forester's Desktop, Plot Builder and ForestPro Compiler.

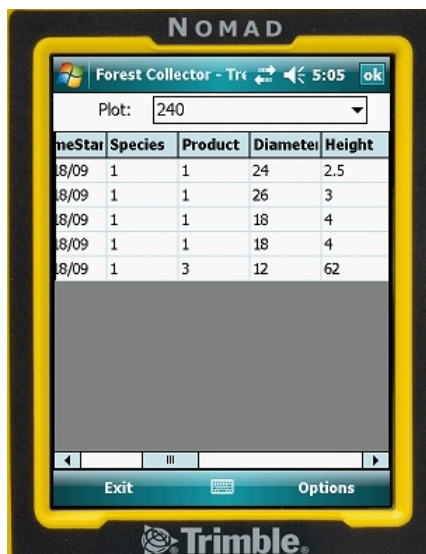

Portable Software

Mobile Resource Suite Edition v4.5

Tree entry view for fast and efficient data entry

Tree tally view for editing errors on data entry

Forest Inventory Features

- Data entry is fast and efficient with drop down menu selections and/or key press entry options.
- Drop down menus are populated based on imported setup files that provide parameters for each specie/product combination.
- As the ADD TREE screen retains the last value for each field entered, duplicate or similar trees are entered quickly by only changing the fields that vary from the previous.
- Errors in data entry are found and edited efficiently through the tree tally view.
- Tree tally is downloaded seamlessly into the ForestPro Compiler for inventory analysis and reporting. Tally is exported as a comma separated file for analysis in other inventory systems.

Map view displaying plots and current location icon.

Tap screen menu for adding/editing plot data

Map View

- Plot files and GIS layers are imported seamlessly from Forester's Desktop and Plot Builder.
- MRS accepts imports from all other GIS systems.
- Layers can be labeled and arranged as needed within the map view
- View is user-friendly with the Basic GIS tools such as Pan, Ruler, Identify feature, and Map scale bar.
- With GPS enabled, current location is identified by the location icon.
- Plots data can be added or edited by a single tap screen selection of the plot in the map view.

Related Products

- Silvics Solutions offers a comprehensive suite of GIS based forest management applications that work together as one integrated system. Each application can be run individually based on you needs.
- Forester's Desktop-GIS application specifically designed for the forestry industry that incorporates both spatial and tabular data. Inventory data can be imported directly from our ForestPro Compiler.
- ForestPro Compiler-Desktop application designed by foresters for processing and reporting inventory data collected in the field. MRS integrates with the ForestPro Compiler.
- PlotBuilder-Application designed to speed up the process of developing plot shapefiles with stand attribute data. Plot file can be developed and imported into the MRS in a matter of seconds.
