

- Start by making sure your Mobile Device is connected to your computer via ActiveSync. Once connected please make sure MobileStaker 4.51 is not currently open on the device. If so please exit the program by clicking on the **MENU** button then selecting **EXIT**.
- Launch the Tri-Global Mobile Device Manager 2.13, then select the **EXPORT DATA** tab. Make sure that the Data Source is set to **DEVICE**, and that you have the Partner XML's box.
- When ready hit the **EXPORT DATA** button.
- After hitting the Export button you will get a message stating: *"Copying Data from Device to Desktop. Please make sure your device is connected."* Click **OK**. Another message will display stating: *"Export completed successfully"*. Click **OK**.
- Once the export has been completed successfully, you can now launch Partner.
- Open or create a Job, and select **FILE, STAKER, Mobile Device File Import**.
- The Mobile Device File Import Dialog box will appear. Please make sure that the file type is set to **"Mobile Staker Files (*.xml)"**. Also the File Import Folder needs to be set to **C:\TriglobalData\Partner**. Once this path is set Partner will remember it.
- Select the MobileStaker job that corresponds to your open Partner job and click **OK**. If you are not sure which job corresponds to your Partner job, use **PREVIEW**.
- Once your MobileStaker job is into Partner you can put the finishing touches on your Staking Sheets. At this point you can even Differentially Correct your MobileStaker data for better accuracy. Please check with your Tri-Global representative for details on doing so.
