

- Start by making sure your Mobile Device is connected to your computer via [ActiveSync®](#). Once connected make sure MobileStaker™ 5.0 is not currently open on the device. If so please exit MobileStaker by selecting [MENU](#), then [EXIT](#).
- Next launch Device Manager 5.0 and select [SEND TO GPS](#), then [PARTNER](#), then [IMPORT UNIT TYPES](#). The Import Unit Types dialog box appears and prompts you to browse to the directory containing your Unit Types.xml file(s). For a majority of MobileStaker users the path will be.....
`C:\ProgramFiles\Partner\Staker\5.3\Shared\config\customer\pocketpc`
*Please note the first part of this path (in red) pertains to where Partner was installed on your computer. This may vary from your path. Please check to see where Partner was installed on your computer. The second part of the path (in green) will be the same for a majority of MobileStaker users.
- If you are not entirely sure where Partner was installed you can utilize the search feature on your computer. Just search for [FilterTreeData.xml](#) and your computer should find this unique file very easily.
- Once you have entered the path you can click on the [IMPORT UNIT TYPES](#) button on the importer. After a short time you will receive a message stating [WOULD YOU LIKE TO APPLY CONFIGURATIONS TO YOUR UNIT TYPES?](#) You can select either [YES](#) or [NO](#). If yes is selected you are brought to the configurations manager. If no is selected the importer will continue and you will see a dialogue box open stating [TGF CONVERSION COMPLETE- WOULD YOU LIKE TO COPY THIS DATA TO YOUR DEVICE?](#) Click [YES](#). After a brief period of time another message will be displayed stating [COPY COMPLETE](#). Click [OK](#). Now that the Unit Types have been successfully loaded onto your device you are ready to go STAKING!!!
