

Tri-Global Mobile Utility Suite 5.0

.Zip and Email Data Files Using TGT Device Manager.

- Please make sure that your device is connected to your computer via either ActiveSync or Windows Mobile Device Center.
- Next make sure you completely exited the Mobile Utility Suite software program on your device.
- On your computer's Desktop create a new folder and name it. In this example, the folder name is **MUS Files**.
- Now launch Tri-Global Device Manager and select the **TRANSFER FROM GPS** tab.
- In the **OUTPUT DIRECTORY** selection, click on the browse icon and browse to your new folder that you created on your desktop.
- Next make sure that the **ZIP AND EMAIL DATA FILES** box is checked.
- Now click the **TRANSFER DATA** button.

You will receive a message stating *"Copying data from the device to the desktop. Please make sure your device is connected."* Click **OK** to continue.

If successful you will receive another message stating *"The data was transferred successfully."* Click **OK** to continue.

At this point you will notice that your Email server has launched and has already attached the .zip data file. From this point just fill out the rest of the information and send the email! Because we also set up an output directory, your files are in your created folder as backup, should any part of emailing the files fail.
